

National Survey of Crime & Safety [NSCS]

Westat is working with the Bureau of Justice Statistics (BJS) to redesign its National Crime Victimization Survey (NCVS), which is administered for BJS by the Census. The NCVS is the only national source of data on victimization not reported to law enforcement. As part of the redesign effort, Westat is conducting a field test comparing the current NCVS instrument with the redesigned version developed by BJS and Westat.

NSCS Interviewers will contact households and will conduct the initial screenings to determine participant eligibility, gain respondent cooperation, and administer interviews using computer-assisted personal interviews (CAPI) on a Westat-provided laptop computer.

Please join our data collection team on this valuable field test by clicking the "Search for Positions and Apply Now" button on the main page of this site and searching for our positions using the keyword NSCS.
